At Mezab we view IT as the most business enabler and we help our clients to make the most of their IT investment in order to reach the highest level of success. Whether you are small to medium-sized business (SMB) or large enterprise our lifecycle approach in designing and developing IT solution is the same.

First, we spend time to assess your business needs and requirements and once we understand your requirements and priorities we begin planning, designing, implementing and integrating unique IT solution that aligns with your unique business requirements. Our vast enterprise networking, data security, collaboration, and virtualized data center solutions are tailored to enable your company achieve its business goals and to set your company above competition.

Our technology solutions cover:

Enterprise Networks

- ✦ LAN Switching
- ✦ Wireless Networks
- ✦ WAN Routing
- ✦ Security

Collaboration

- ✦ Voice Communications
- ✦ Messaging
- ✦ Video
- ✦ Instant Messaging & Presence
- ✦ Mobility
- ✦ Contact Center

Virtualized Data Center

- ✦ Unified Computing
- ✦ Storage Networks
- ✦ Data Center Networking
- ✦ Virtualization
- ✦ Backup and Recovery
- ✦ Virtual Desktop Infrastructure(VDI)

Enterprise Networks

Delivering wired and wireless enterprise network architecture to meet changing demands

In the past multiple communication networks were entirely separated, each of them served a specific application. For example the traditional Public Switched Telephone Network (PSTN) served voice application, the Internet and Intranets served data communications, and multiple H.320 networks served videoconferencing. Today as business requirements force these networks to interoperate our enterprise networking consultants are well experienced to help you make this jump and redesign your network by uniting multi-service applications for voice, video and data on a single secured and converged enterprise network infrastructure.

Using our lifecycle services approach, we design, implement, operate and optimize enterprise network infrastructure including LAN and wireless LAN and security solutions that are highly scalable and flexible to your growth-oriented needs.

We know that the challenge is in choosing a network solution that will not only meet your present day business requirements, but will continue to support your business throughout the next several years -- and we provide the expertise to help you determine the network solution investment with the best ROI.

Collaboration

As a Cisco Collaboration specialist partner, we deliver comprehensive collaboration solutions to customers that allow them to evolve the way they work. The Cisco Collaboration Architecture breaks down the barriers that exist between different content formats, tools, devices, companies and people working towards a common goal. From endpoints to networks to servers, we deploy, implement and operate business collaboration solutions that generate ROI – not only from the operational savings realized but also from the increased productivity and strategic advantages that are created.

Our goal is to help you empower your employees, customers, and partners with the collaboration tools to work when, where, and how they want, without traditional limitations.

Offering the following unified communications technology solutions from Cisco:

Unified Communications

We help you implement robust solutions for call control, gateway communications, and Unified Communications that bring together voice, video, data, and mobile collaboration in ways that reduce costs, improve productivity, and boost business innovation.

Conferencing

We will help you optimally implement Cisco's scalable web and video conferencing solutions so your teams can collaborate securely wherever they are. Give employees, customers, and partners the integrated voice, video, and content sharing solutions they need to make meetings more productive, accessible from mobile devices, desktops, or conference rooms.

Collaboration Endpoints

From IP phones to fully integrated room based video conferencing to web, mobile, and desktop clients, our consultant will help you optimize the user experience, and every interaction, through secure, reliable collaboration that supports mobile workers, remote workers, and flexible work spaces for in-office employees.

Virtualized Data Center

Our data center solutions include:

Unified Computing Systems

Our consultants design and implement next-generation data center platform to work in your organization using Cisco or multi-vendor Unified Computing System. The architecture unifies compute, network, storage access, and virtualization into an easily manageable system that lowers your IT costs while increasing your data center flexibility.

Unified Storage

Our data center consultants work with you to design the most efficient storage architecture for your organization, using innovative techniques and technologies to reduce the cost of storage, maximize utilization, and simplify management and provisioning.

Data Center Networking

Using Cisco's leading network technology, we streamline data center networking by eliminating unnecessary equipment and operational expenses – all while enabling higher levels of performance.

Server Virtualization

Virtualized data centers are innovating organizations today. Using hardware and software tools from our trusted partners, Cisco, EMC, VMware and others, our consultants strategically designs and implements flexible and scalable data centers that are able to meet your organization's diverse capacity demands at any given time.

Desktop Virtualization

The desktop virtualization solutions enable organizations to manage desktops from a central location, significantly simplifying desktop management and giving end users the freedom from one specific device – without sacrificing security.

Backup and Recovery

In today's digital enterprises, data is everything. We understand this and are committed to creating the ideal backup and recovery solution, as part of a business continuity plan, tailored to your organization's unique requirements using tiered storage systems that cost-effectively back up, replicate, and archive data.

Our HAPPY clients!
